

DISCUSSIONS

The function "Discussions" can be used in different modules to keep the workflow streamlined. Everyone gets access to the history and can take part of relevant discussions.

When considering e.g. a risk control option, it is important that the decision process is transparent and all involved stakeholders are invited to contribute. The "Discussions" function provides a perfect and natural platform where user can transfer and share information such as comments, questions and advises.

All notifications for the discussions can also be handled by email, making it easy and quick to answer a discussion. No need to access the system to contribute. Thanks to the email notification, you will never miss anything happening in the system.
